

## Tobacco Reduction Display models

The items included in the display models have been purchased from:

Directional Learning Canada Limited  
480 Washington Street,  
P.O. Box 369  
Elora, ON N0B 1S0.  
Phone 519-846-5397

Bioquest inflatable lungs	LS03768	\$360
Poison Trap smoker	BA79258	\$519
Tobacco ingredients display	BA79260	\$135
A years worth of tar	BA79120	\$72.95

Please note that if you order more than one of each item, a slight price reduction if available.

Also if you order the inflatable lungs request the instructional video as well.

### **1. Poison Trap Smoker**

This newly re-designed 'Poison Trap Smoker' graphically demonstrates the hazards of smoking. Tar deposits accumulate visibly on an image of a pair of lungs, effectively showing the damage done by the contaminants in every cigarette. The 'Smoker' is placed in a tray of water during demonstrations, ensuring that a complete seal is formed and that all the smoke produced is safely contained within the box.

### **2. Ingredients Display**

The toxic chemicals found in tobacco smoke are more easily remembered by associating them with common and grossly unappealing substances. This eye-catching Plexiglass display resembles a cigarette but allows viewers to see what's really inside tobacco smoke. The included two-sided tent card can be used with either adult or child viewers. 24-3/4" x 4-1/2".

### 3. BioQuest® Inflatable Lungs Comparison Kit

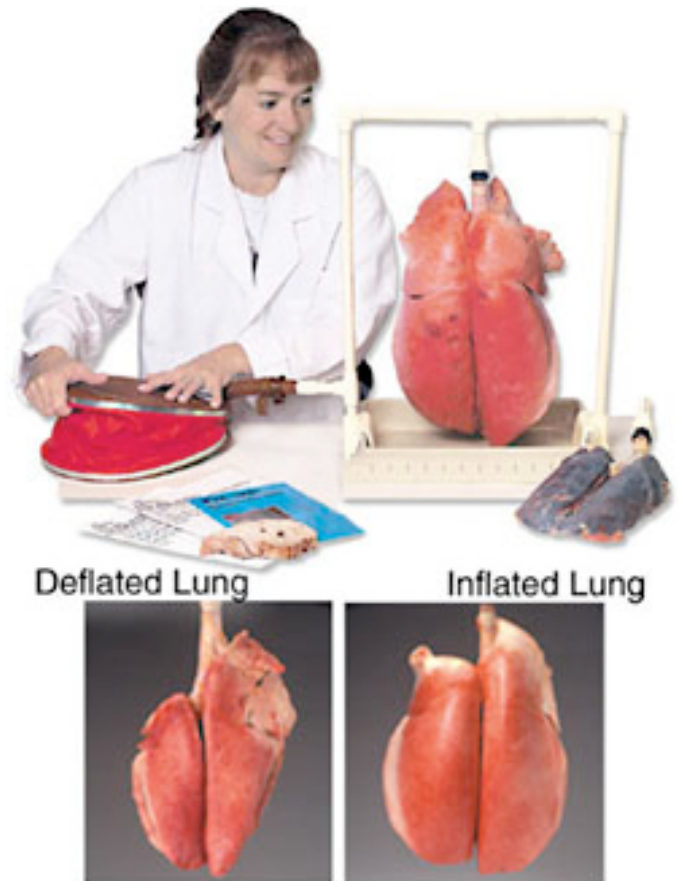

#### Product Details:

Dramatic demonstration kits that provide an impressive, unforgettable, hands-on demonstration of the texture and fragility of the mammalian lungs, as well as demonstrating that real lungs are not like rubber balloons in a bell jar. The teacher's guide emphasizes the handling, use, and storage of the reusable swine lungs, and includes a detailed illustration of internal anatomy. Supplemental information about lung cancer, other smoking induced diseases, and air pollutants is also included.

Use humectant fluid to keep the lungs moist when in the Tupperware containers.

It is available for about \$25/gallon.

This inflatable lung comparison kit is designed to demonstrate the effects of prolonged smoking. It utilizes the BioFlex preserved lungs from the Inflatable Lung Kit (LS03733U) and the BioFlex preserved lungs from the Simulated Smoker's Lungs Demonstration Kit (LS03734U) to demonstrate to students the differences in color and texture of smoker's and non-smoker's lungs. The BioQuest® Comparison Lungs Kit includes an inflation rack and tray; air pump; one pair of reusable, normal inflatable swine lungs with guide; one pair of Simulated Smoker's Lungs with guide; and one section of dried swine lung. Grade 6 and up.

### 4. A Year's Worth of Tar

This graphic, sealed exhibit, contains a cigarette package and cigarette butts submerged in gooey "tar" which represents the amount of the carcinogenic liquid that smoking one-half a pack per day for one year would put in your lungs.
